

# Global Lab Quality Initiative

GLOBAL  
LAB QUALITY  
INITIATIVE

AACC  
Advancing health through laboratory medicine

AACC's Global Lab Quality Initiative (GLQI) unites international laboratory science experts and laboratory professionals to foster a global exchange of clinical testing best practices. This initiative is generously supported by the Wallace H. Coulter Foundation (WHCF). Wallace Coulter was an innovator, inventor, and entrepreneur who revolutionized the practice of hematology and laboratory medicine and pioneered the development of flow cytometry and monoclonal antibodies.

Throughout 2018, GLQI will continue to deliver quality control and method verification workshops in the Latin America and Caribbean and Asia-Pacific regions in collaboration with clinical chemistry associations.
